

The increasing amount of traffic congestion in our cities has been a growing cause for concern for some time. Such a build up of cars on our roads is causing serious problems in terms of pollution and loss of productivity in the economy. It seems to be increasingly clear that measures need to be taken in order to address this issue.

To begin with, it is cause for concern that increased traffic congestion is resulting in serious pollution problems in our major cities. It is clear that the increased number of cars on our roads is due to urban sprawl, which causes more and more people to rely solely on their private vehicles for commuting. This reliance on cars leads to an increase in the of emission of harmful greenhouse gases and other dangerous pollutants, which contribute to global warming as well as a rise in harmful health effects for people. Another worrying trend is the loss of productivity caused by the amount of time it now takes for people and goods to move about our congested cities. Therefore, as a result of this loss of productivity, companies experience an increased financial burden, which in turn has a detrimental effect on our overall economy.

Clearly action needs to be taken to solve these problems. One thing that would improve the situation is if the government committed to improving public transport infrastructure. This would bring about a reduction in cars used for commuting and free up the road system so it could be used to transport goods more efficiently for business. Unless more thought is given to urban planning, this trend may not be reduced. Furthermore, the government should also provide incentives for people to use public transportation by making it more affordable. Otherwise the problem of reliance on private vehicles will continue.

To sum up, it is clear that traffic congestion will continue to cause pollution and loss of productivity in our cities in the future. Therefore, the only way to improve this situation is for the government to step in and take action to improve infrastructure and provide incentives.
